tiramizoo

Integration into Transport-Management-System

CAPcargo AG

CAPcargo, based in Switzerland, is a provider of a Transport-Management-System for logistics companies.

Tiramizoo

Tiramizoo, headquartered in Munich/ Germany, offers a SaaS-Platform for orchestrating and optimizing Last Mile deliveries. The platform leads to 100 % visibility, full automation, optimal usage of resources, lowest CO_2-footprint and customer engagement. At the heart of Tiramizoo's platform is the proprietary algorithm for calculating most efficient routes by considering urban constraints like traffic, availability of vehicles, opening hours, driver skill set etc. Tiramizoo can easily be integrated into Telematics, ERP, WMS, TMS etc. via public API.

Challenge

CAPcargo's TMS covers the whole logistics processes of its customers.

In order to offer its customers a state-of-the-art solution for each step of the logistics process, CAPcargo also cooperates with external partners.

Therefore, CAPcargo is looking for specialists in route planning, since it does not intend to build up route planning capabilities in-house.

The integration must be possible via a standard API.

Solution

CAPcargo integrates the Tiramizoo-technology via a standard API.

Doing so, CAPcargo's customers can activate Tiramizoo's route planning within the CAPcargo-Architecture.

The data exchange between CAPcargo and Tiramizoo takes place in the background.

Result

CAPcargo can offer its customer state-of-the-art route planning technology without investing own resources.

CAPcargo benefits automatically from the ongoing improvements of Tiramizoo via the API-Integration.

CAPcargo's customer have a one-stop-experience and use the CAPcargo-TMS for the whole supply chain.
